

Technical Manager - Overview

Redstart is a remediation & enabling work contractor providing remediation environmental consultancy & demolition. Redstart is an Employee Owned Trust Company with a head office in Stockport. The Redstart team is small and ambitious, providing remediation & enabling works services to a range of industry sectors and also providing geo-environmental consulting services. A senior role has become available for the technical lead of the business.

Ideally Chartered or close to chartership, the technical lead role will encompass a broad range of responsibilities associated with the technical and operational delivery of both site and office-based work. The preferred candidate will have senior level experience in contaminated land assessment, earthworks / ground engineering specifications.

For the right candidate, this role offers significant potential for career advancement in a successful fast-moving employee-owned company where your input will be valued and rewarded. For the right person there is opportunity to be involved in the management of the business developing into a business leader in due course and progressing to technical director.

On occasion you may be required to plan execute and undertake site work depending on available resources. The majority of works will be within the Northwest; however, occasional work further afield may be required. It is expected that you will recruit, develop and manage a small consulting team to assist with delivery.

Responsibilities

- Technical lead of the business
- Manage, deliver & conduct technical works for the contaminated land consultancy & remediation contracting part of the business (typically phase 1 & 2 reports, remediation strategy & validation/ verification works). On occasion you may be required to plan execute and undertake site work depending on available resources. The majority of works will be within the Northwest; however, occasional work further afield may be required.
